

One for all!

Our BNS nail disk is the only one of its kind which is universally applicable in all wall gaps from 25 until 46 mm. This advantage enables you to use only one nail disk which can be adjusted to the right wall gap width by turning the product.

The BNS consists of a high quality polypropylene and a galvanized, hardened steel nail. The nail has been prefixed in the product.

The nail disk holds very steadily thanks to its form and has additional cable-holding teeth which makes the product even more stable. This makes cables falling out a thing of the past. Last but not least, the BNS has a rough surface and openings across the disk which enables the plaster to hold very well on the product which makes sure that a smooth plastered wall will shine as your end result.
